## Summary

---

Software Engineer dedicated to advancing AI capabilities through rigorous model evaluation, test-driven architecture, and containerized workflows (Docker). I specialize in crafting long-horizon coding tasks, deterministic test suites, and high-quality RLHF data. Leveraging my own substantial private codebases, I build complex, agent-resistant rubrics that genuinely challenge and improve AI reasoning.

## Education

---

### Software Engineer

Adama Science And Technology University

10/2023 – 09/2028 | Adama, Oromia, Ethiopia

## Skills

---

Engineering & Web: Python, TypeScript, C++, MERN Stack, FastAPI, Tailwind CSS

AI & Evaluation: AI Agent Orchestration, RLHF, Rubric/Data Grading, Prompt Engineering, Long-Horizon Evals

Infra & Testing: Docker, PyTest, Jest, CI/CD, Deterministic Test Authoring, Containerization

## Professional Experience

---

### AI Training Engineer & Software Tester | Contract/Project-based

- Contributed to the optimization of AI models through RLHF and detailed technical evaluations.

### Full-Stack Web Developer | Various Projects | 2023 – Present

- Designed and deployed high-performance web applications using the MERN stack.

### Competitive Programmer

- Codeforces & LeetCode:** Solved 500+ algorithmic and data structure problems, consistently optimizing time and space complexity.

## Projects

---

### AutoSRE & TradeDraft (Private Codebases)

Engineered a multi-agent Git automation loop (AutoSRE) and a deep, stateful web platform (TradeDraft). Both feature complex, multi-file architectures requiring deep investigation, perfectly suited for designing AI evaluation tasks
